

A NEW LEVEL OF
World-class breast care
HAS ARRIVED

TAILORED SCREENING FOR EARLIER DETECTION

At Shady Grove Breast Center, our risk assessment software calculates your patient's lifetime risk of developing breast cancer. Using that information, we customize a screening protocol just for her:

- Full-field digital mammography alone – *for women at average risk*
- Additional imaging technologies, such as screening breast MRI, to supplement mammographic imaging – *for women at high risk*

If an abnormality is detected, we employ the most sophisticated technologies for an accurate diagnosis. Services include diagnostic breast MRI, diagnostic breast ultrasound and minimally invasive biopsies.

FIVE MORE REASONS TO CHOOSE SHADY GROVE BREAST CENTER

1. **All-encompassing care**, including breast cancer prevention, treatment and follow-up services available at one location
2. **Experienced, highly specialized physicians**, plus technologists who dedicate all their time to one modality

3. **Complete diagnostic evaluation given the same day** as your patient's visit (in most cases), a benefit offered by only a handful of U.S. breast centers; biopsy results are communicated within 24 to 48 hours
4. **Fast appointment scheduling**, usually within 24 hours
5. **Accreditations** from the American College of Radiology in mammography, breast MRI and breast ultrasound

Major and local insurance plans are accepted. To schedule an appointment for your patient, contact us today.
